

Insulated Roller Garage Doors

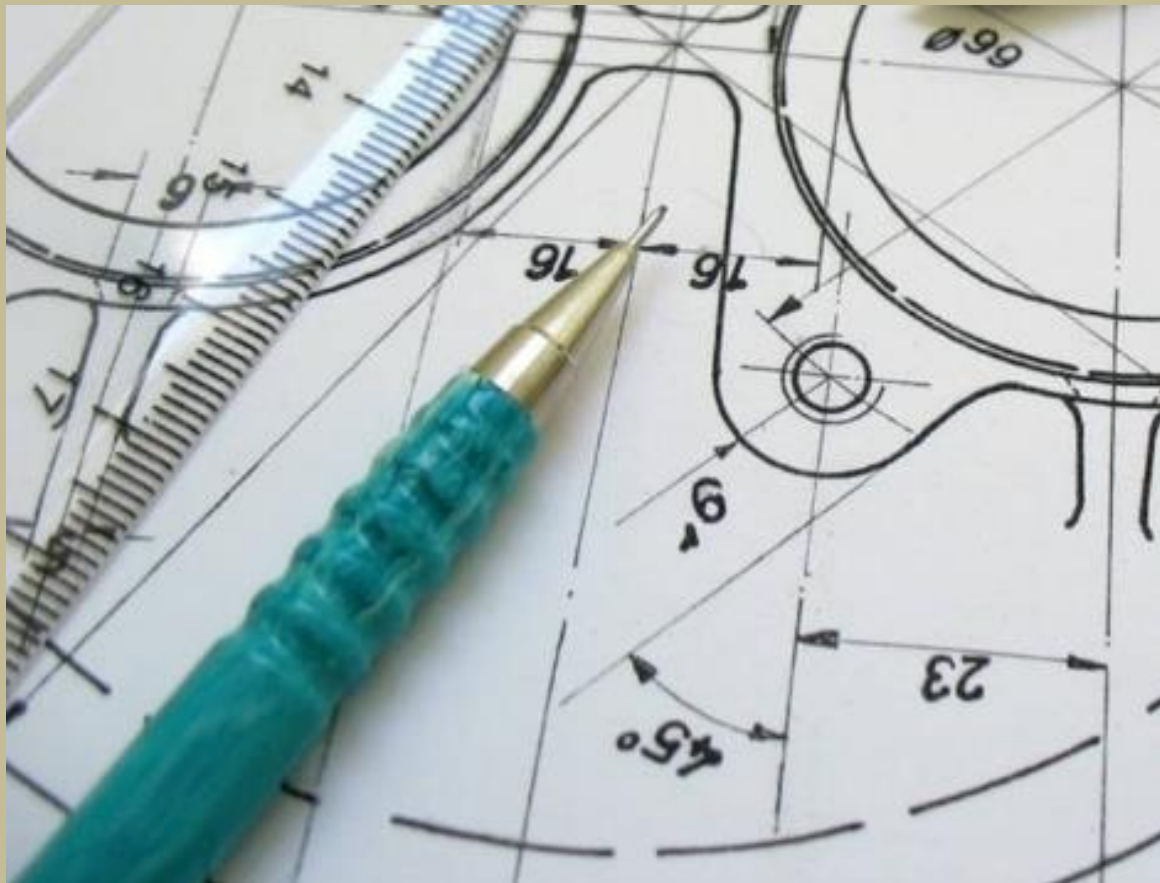

BY TROJON

Quality.
Safety.
Choice.

Introduction

The Trojon Roller Door range of insulated roller garage doors assembled by Trojon Trade Doors in Leicester. We are proud of our technical solutions and quality within the British roller door market.

All our products comply with the latest European standards including EN 13241-1:2003. This means that not only do we use quality engineered products we also supply a garage door that is safe to use in everyday life!

The Roller Door

Your new door can be one of the most visible parts of your home. The smooth clean lines of the insulated lath enables our doors to blend in smoothly with the appearance of your home, whether it's a sleek minimalist pad or an English country classic appearance is always key!

Features & benefits of the Roller Door

The Roller Door has many features and benefits, listed below are few key ones:

Gain greater drive through distance by removing your old timber framed door. Parking the car in the garage will be less of a squeeze and more of a breeze!

Also being able to park close to your door whilst being able to open and close it can be a big benefit to those with short driveways.

The 77mm insulated lath which forms the main Curtain provides an excellent thermal break between the inside and outside

Not only does the 77mm lath provide excellent thermal break, it also provides an acoustic barrier from noise into your home. The foam insulation helps reduce or dampen vibration noise when compared to traditional steel up & over doors which can sometimes amplify noise level especially when opening and closing.

An excellent bottom EPDM seal gives a nice seal at floor level. This combined with brush strips fitted within the door guides at the side of the door curtain help reduce draughts and debris entering in to your garage.

Safety with built in security

At Trojon Trade Doors we value your safety! That's why all our doors are fitted with the latest safety systems such as in-built safety brake and our safe-edge system below; which detects obstructions on impact and auto reverses

Also included as standard is our "Auto lock" system. This automatically keeps the door locked in the closed position using special interlocking hinges fitted to the top of the door curtain.

Our remote control systems all have a “Rolling Code System” which means it’s virtually impossible to copy the frequencies of your handset thus enabling access to your garage.

Life’s not always black and white!

Why not choose something different to compliment your home. You can choose from a wide range of colours including the latest wood grain finishes complimenting your uPVC window, door & soffits; we’ll even make you a striped door for those truly dedicated sports fans!

Important customer information relating to conformance & CE Marking.

All electric garage roller doors must comply with current machinery directives.

The tube motor, all electrical parts, all door materials and components that make up a working electric roller door must have a declaration of performance from the manufacturer.

After any installation of any electric roller door it will be classed as a working machine and the installer must provide a declaration of conformity to the customer and must apply a CE mark which relates to the tube motor, all electrical parts and control systems along with the parts and materials that make up the structure of a working door.

Along with the operating instructions, service and maintenance information the customer must be given the declaration of conformity.

The Manufacturer will hold all relevant information and documents concerning the declaration of performance and the declaration of conformity in a technical file to be viewed if required by authorised bodies only.

If any of the above is not carried out or adhered to then the installation will be deemed illegal. The

customer should satisfy themselves before ordering and installing any electric roller door that the installer is able to meet all the relevant requirements above.
